

# Using Fish Tape

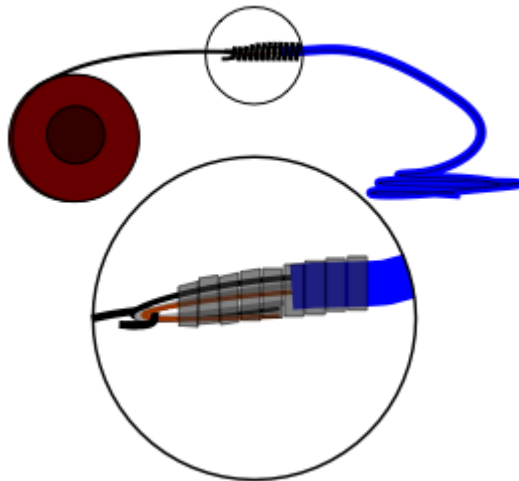

Conduits, wall, floor and roof cavities contain live electrical wiring. **DO NOT** use this device anywhere around live electrical wiring.

**Ensure all electrical power is turned off and disconnected from the mains before use.**

- 1) Feed the fish tape through the cavity to the intended point. Placing tape over the end will allow it to move through the wall easier.

- 2) Strip the wire to be fed through the cavity and wrap the exposed wire through the end of the fish tape
- 3) Use electrical tape to secure the cable to the fish tape

- 4) Feed the fish tape back through the cavity with the attached cable
