

Universal CPU Cooler

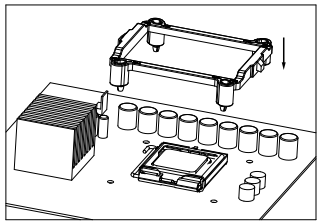

Installation Instructions

YX-2588

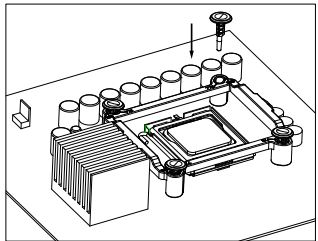

Intel™ Socket:

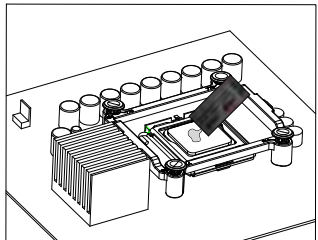

1. Install four clear plastic inserts into the hole of the mounting bracket according to the CPU socket type.

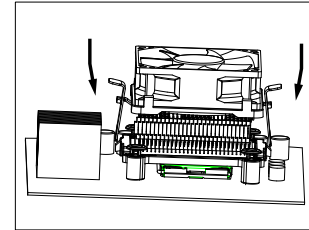

2. Install the mounting bracket on the motherboard and push the four plastic hooks through the mounting hole.

3. Insert the four plastic push pins into the hole of the plastic insert.

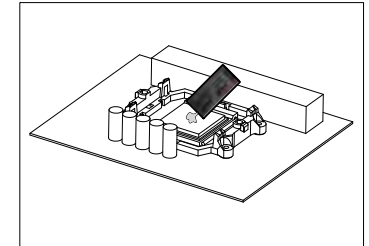

4. Apply the thermal compound on the surface of CPU metal plate.

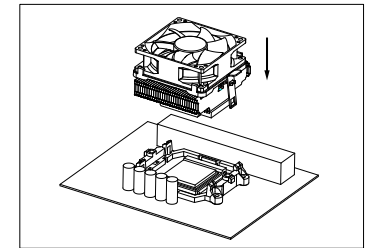

5. Install the cooler by pressing the mounting clip until it's hooked in.

AMD Socket:

A) Apply the thermal compound on the surface of the CPU metal plate.

B) Place the cooler on top of the CPU.

C) Install the cooler by pressing the mounting clip until it's hooked in.
